Stanozolol injection (Winstrol depot)

Dosage

Injectable Stanozolol is recommended to be taken in a dosage of 50 mg every day throughout the course. For athletes whose main factor is endurance and strength (professional boxers, athletes, etc.), it will be enough to consume 10-20 mg. The solo course of taking the drug lasts for 5 to 8 weeks.

Side effects

This type of steroid is one of the safest. It does not have an estrogenic effect – athletes do not suffer from gynecomastia and puffiness. However, there are still several side effects of the drug:

- Drawing pain in the joints;
- High blood pressure and cholesterol, hypertrophy of the heart muscle (these problems can occur only with an overdose).

Side negative moments are very rare, and if you follow the instructions, you will always be safe.

Reception effects

- The relief of muscles is clearly visible;
- Eliminates excess water;
- Reduces increased amounts of globulin;
- Increases strength and stamina.
